PRO: learn muscle memory before draft

! COMMON MISTAKES TO AVOID

- X Running full research 10 mins before draft
- Do it day before. Day-of = quick refresh only.
- X Ignoring confidence % when picking
- 60% ≠ 94% — read the number, don't just pick #1
- X Not verifying scoring settings
- PPR vs standard shifts 40% of the board
- X Panic-pivoting on every alert
- Trust your strategy until data says otherwise
- X Dismissing Trash Talk as noise
- It's real-time opponent weakness intel
- X Forgetting keepers / not marking them

◆ AUCTION VS SNAKE

AUCTION (Joe · ESPN)

- Card shows \$ value + \$68–\$76 range
- Budget pace line vs \$200 cap
- Nomination helper (strategic "throw-ins")
- Inflation tracker (market above / below value)

SNAKE (Tyler · Yahoo · keeper)

- Card shows ADP + round target
- Tier cliff warnings ("2 RB1s left")
- Snake clock position (3.7 = 3rd rd, 7th pick)
- Keeper cost integration (round penalty)
- ADP delta on every rec (steal / reach math)

Engine shared · UI differs

↻ AFTER DRAFT DAY · IN-SEASON & NEXT YEAR

- Keep the Saved Run open all season — reference tags + confidence for waivers/trades
- Next year: re-open league, adjust keepers, re-run "Optimize Your Edge"
