SAVE THE RUN

Prep Hub → Runs → Ⓚ Save

◆ Save 2–3 runs, compare ADP

◆ WHAT YOU'VE PRODUCED — SNAKE + KEEPER OUTPUT

1. ADP-tuned Board — every non-kept player ranked for YOUR scoring + league size

2. Round-by-Round Plan — "at pick 3.7 take X, at 4.6 take Y" (personalized to your slot)

3. Target List — reach candidates (ADP gaps you'd pay up for)

4. Tier Cliff Map — where the falloff is at each position

5. Keeper Value Check — which of your keepers are steals / overpays

6. Saved Run — compare ADP shifts before draft day

◆ DAY-BEFORE CHECKLIST (TYLER)

☐ Confirm keepers locked in Yahoo + app matches

☐ Re-run "Optimize Your Edge" (injury shifts ADP)

☐ Confirm your draft slot + round 1 target

☐ Charge phone · strong wifi · app open 10 min early

★ WHEN TO CALL THE LLM (SNAKE + KEEPER CONTEXT) ★

Each call costs money and time — know which action triggers one.

◆ CALL THE LLM WHEN...

✓ You configure the Yahoo snake league (once)

✓ After keeper deadline — ADP shifts with kept players removed

✓ Day before — latest injury / ECR pushes tier cliffs

✓ It's YOUR pick on the clock — 3 AI targets + ADP context

✓ Mid-draft pivot — "5 RBs gone, switch to Hero-RB?"

✓ Adding snake rules ("no QB before R5")

✓ Final post-draft — grade, ADP efficiency, steals/reaches, roast

! DON'T CALL THE LLM WHEN...

✗ Browsing the ADP board — cached, no call

✗ Filtering by position — local filter only

✗ Expanding a player card for tier reasoning — cached

✗ Reviewing a saved Run — replay, no new call

✗ Re-running research multiple times "just in case"

✗ Between picks on others' turns — wait until it's your turn

✗ Toggling keeper flags — only full re-run updates ADP
